

AHP24-15D

trailer-test-device
for testing trailer lighting 24V

The AHP24 (trailer-test-device) is designed for testing the lighting of a trailer. The test allows to switch on and off indicator left, indicator right (integrated indicator relay), stop light, rear light left, rear light right, fog lamp and reversing light independently of each other.

- * every function individually switchable
- * integrated indicator relay
- * continuous positive power supply on terminal 9
- * total power 300W

input voltage:
230V (180 ... 260V, 45 ... 65Hz)

output voltage:
24V

output power:
total power 300W

connection input:
230V safety plug

connection output:
socket 24V
15 contacts ISO4091

display:
blue LED for 24V power supplies OK

dimensions:
254 x 180 x 123 mm (without cables)

mechanical protection:
IP 64 (dust and splashing drop protected)

electrical protection:
short-circuit, overtemperature

electrical safety:
safety class I (protective conductor)

efficiency:
app. 87%

mass:
app. 3,100g

Order Info:
